/clone_lib="venom glands; vector: pGEMILZf+; Site_l: Site_l: Not I; Sug of mRNA from Bothrops insularis venom glands were primed with oligo-(dT) and reverse transcribed to CDNA using Superscript Plasmid System for CDNA synthesis and cloning (LifeTechnologies). The CDNA were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGEMILZf+ vector (Promega). ESTS were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value <

venom glands were primed with oligo-(dT) and reverse transcribed to cDNA using Superscript Plasmid System for CDNA Synthesis and Cloning (LifeTechnologies). The CDNAS were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pSRMILIE; vector (Promega). ESTS were generated from random clones and grouped in unique sequences. The putative identification of each EST or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               JLH06F Snake Bothrops insularis library IL3 Bothrops insularis cDNA 5' similar to Snake venom C-type lectin, mRNA sequence.

/clone_lib="Snake Bothrops insularis library IL3"
/note="Organ: venom glands; Vector: pGEMIJZF+; Site_l: Eco Ri, Site_2: Not I; Sug of mRNA from Bothrops insularis venom glands were primed with oligo-(dT) and reverse transcribed to cDNA using Superscript Plasmid System for cDNA Synthesis and Choning (LifeTechnologies). The cDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally clone in pGEMILZF+ vector (Promega). ESTs were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value < e-05)."
                                                                                                                                                                                                                                                                                                                 BM401598 406 bp mRNA linear BST 01-MAY-2002 JH4F11F Snake Bothrops insularis library IL3 Bothrops insularis cDNA 5' similar to Snake venom C-type lectin, mRNA sequence.

/clone_lib="Granke Bothrops insularis library IL3"
/clone_lib="Gran." venom glands, vector: pGEMILIE+; Site_l: Eco RI; Site_2: Not I; Sug of mRNA from Bothrops insularis venom glands were primed with oligo-(dT) and reverse transcribed to cDNA using Superscript Plasmid System for CDNA Synthesis and cloning (LifeTechnologies). The cDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGEMILIE+ vector (Promega). ESTs were generated from random clones and grouped in unique sequences. The putarive identification of each EST or cluster was obtained through Blast searches (e-value < e-05)."

venom glands were primed with oligo-(dT) and reverse transcribed to cDNA using Superscript Plasmid System for CDNA Synthesis and Cloning (LifeTechnologies). The CDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGRMI1Zt vector (Promega). ESTS were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value < e-05)."

/note="Organ: venom glands; Vector: pGEM11Zf+; Site_1: Eco RI; Site_2: Not I; Sug of mRNA from Bothrops insularis venom glands were primed with oligo-(dT) and reverse transcribed to cDNA using Superscript Plaemid System for CDNA Synthesis and Cloning (LifeTechnologies). The cDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGEM11Zf+ vector (Promega). ESTs were generated from random clones and grouped in unique
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EST 01-MAY-2002

/clone_lib="Snake Bothrops insularis venom glands; Vector: pGEMILZf+; Site_1: Eco RI; Site_2: Not I; Sug of mRNA from Bothrops insularis venom glands were primed with oligo-(dT) and reverse transcribed to cDNA using Superscript Plasmid System for cDNA synthesis and Cloning (Liferechnologies). The cDNAs were selected by size (13c (13c)-610) gb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGEMILZf+ vector (Promega). ESTS were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value <
                                                BM401683 461 bp mRNA linear EST 01-MAY-2002 PH012R Snake Bothrops insularis library IL2 Bothrops insularis cDNA 3' similar to Snake venom C-type lectin, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Lepidosauria; Squamata; Scleroglossa; Serpentes; Colubroidea; Viperidae; Crotalinae; Bothrops.

Viperidae; Crotalinae; Bothrops.

Junquelra-de-Azevedo, L.M. and Ho, P.L.
A Burvey of gene expression and diversity in the venom glands of the pitviper snake Bothrops insularis through the generation of expressed sequence tags (ESTs)

Gene 299 (1-2), 279-291 (2002)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  75 LysGluLysGlnCysSerIleGluTrpSerAspGlySerSerIleSerLysGluAsnTrp 94

/note="Organ: venom glands, vector: pGEMIJIZF+; Site 1: Eco Ri, Site 2: Not I; Bug of mRNA from Bothrops insularis venom glands were primed with oligo-(dr) and reverse transcribed to CDNA using Superscript Plasmid System for CDNA Synthesis and Cloning (LifeTechnologies). The cDNAs were selected by size (350-600 pb and up 600 pb) in agazose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGEMIJIZ+ vector (Promega). ESTs were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value < e-05)."

were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters at directionally cloned in pGEM11Zf+ vector (Promega). ESTs were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value < e-05)."

                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a new Deinagkistrodon actus anti-thrombosis enzyme, where the enzyme hydrolyses fibrin, dissolves blood clots and prevents platelet aggregation. The anti-thrombosis enzyme was administered to rabbits intravenusly. Thrombosis was determined before and after the administration at 0.5, 1.0, 2.0 and 3.0 hours by the Chandler method. The enzyme showed anti-thrombosis activity at 0.5 hour following administration at 0.05, micro/kg and this activity was increased significantly at 1.0 hour and at 0.01 micro /kg. The composition is useful for preventing and treating vaso-occulusive and thrombositonic disorders, including myocardial infarction, restenosis, angipathic thrombosis, cerebral thrombosis, isohaemic cerebral vascular thrombosis unstable angina, acute thrombosis, inschaemic screbral vascular thrombosis unstable stenocardia, chrombosis, pulmonary embolism, deep vein thrombosis, peripheral arterial occulsion, stroke. It is also useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                         atherosclerosis, oedema and inflammation, cancer and neurodegenerative diseases. The present sequence represents the amino acid sequence of the Deinagkistrodon acutus antithrombosis enzyme alpha chain.
                                                                                                                                              New purified Agkistrodon actus anti-thrombosis enzyme, useful for preventing and treating vaso-occulusive and thromboembolic disorders, including myocardial infarction, restenosis, cerebral thrombosis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                   The PAA was purified from a solution of snake venom. Analysis of the peak inhibitory fractions by SDS-PAGE revealed 2 major proteins migrating with a mol. wt. 23-28 kD. Both were able to inhibit botrocetin and ristocetin induced platelet agglutination. They were called CHH-A and CHH-B. The earlier eluting subunit (CHH-B-beta) and later eluting subunit (CHH-B-alpha) were individually submitted to V-terminal sequence analysis. The complete amino acid sequence (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Vipera palestinae, venom; N-terminal fragment, antithrombotic agent, platelet binding; von Willebrand factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide derived from Vipera palestinae venom - inhibits binding of platelets to von Willebrand factor, useful as antithrombotic
                                                                                                                                                                                                                                     Platelet antiadhesive peptide(s) obtd. from snake venom - also inhibit thrombus formation; for treatment of arteriosclerosis, atherosclerosis, acute myocardial infarction, chronic unstable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           81.2%; Score 138; DB 13; Length 116; 75.9%; Pred.                 AAR72232 is a Vipera palestinae venom derived N-terminal fragment, the full peptide is given in AAR72236. A peptide compsn. comprising AAR72236 and AAR72235 is claimed, it inhibits the binding of platelets to von Willebrand factors and can therefore be used as an antithrombotic agent.

A peptide compsn. comprising AAR72235 and AAR72236 is claimed, it inhibits the binding of platelets to von Willebrand factors and can therefore be used as an anti-thrombotic agent. (Updated on 25-WAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pigmy rattlesnake; venom gland protein; blood coagulation; therapy; platelet aggregation; Zsnk2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptide derived from Vipera palestinae venom - inhibits binding of platelets to von Willebrand factor, useful as antithrombotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ch 79.4%; Score 135; DB 16; Length 127; Similarity 75.9%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ð
                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                The invention relates to new pigmy rattlesnake (Sistrurus miliarius)

venom gland proteins, which affect blood coagulation and platelet

aggregation system. The polypeptides, which affect blood coagulation and

platelet aggregation system, are useful in therapy and diagnostics. The

polypeptides are also useful as an educational tool in laboratory

protein chemistry and antibody production and molecular biology,

protein chemistry and antibody production and analysis. The

polynucleotide or polypeptide can be used as standards or as unknowns

contains by western blotting, protein purification, determining the

weight of expressed polypeptides as a ratio to total protein expressed,

identifying peptide cleavage sites, coupling amino and carboxyl terminal

tags, mass spectromatery, circular dictorism, to determine conformation or

affinity chromatography columns to purify the protein, cloning or

sequencing. The present sequence is Sistrurus miliarius venom gland
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The PAA was purified from a solution of snake venom. The earlier eluting subunit, PP-beta was subjected to Edman degradation for 50 cylces to obtain the sequence in AAR23889. The later eluting sequence - the PP-alpha chain was determined for 31 cycles to give

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a new Deinagkistrodon actus anti-thrombosis enzyme, where the enzyme hydrolyses fibrin, dissolves blood clots and prevents platelet aggregation. The anti-thrombosis enzyme was administered to rabbits intravenously. Thrombosis was determined before and after the administration at 0.5, 1.0, 2.0 and 3.0 hours by the Chandler method. The enzyme showed anti-thrombosis activity at 0.5 hour claim after the administration at 0.05 micro/kg and this activity was increased significantly at 1.0 hour and at 0.01 micro/kg. The composition is useful for preventing and treating vaso-occulusive and thrombositic disorders, including myocardial infarction, restenosis, angiopathic thrombosis, cerebral thrombosis, unstable stenocardia, thrombosic, cerebral thrombosis, unstable stenocardia, thrombosities obliterans, pulmonary embolism, deep vein thrombosis, peripheral arterial occulsion, stroke. It is also useful for treating atherosclerosis, oedema and inflammation, cancer and neurodegenerative diseases. The present sequence represents the amino acid sequence of the prinagkistrodon acutus antithrombosis enzyme beta chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

AL-A may be obtd. from snake venom. It has a mol. wt. of about 45 kDa. AL-A contains two types of polypeptide chains, with mol. wt. of about 18 kDa and about 15 kDa, respectively. Each of these two types of chains is actually composed of two subtypes. Thus, AL-A comprises four non-identical polypeptide chains. A possible variation of ARR38224 has been found, characterised by Asp at posn. three in lieu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vipera palestinae, venom; N-terminal fragment; antithrombotic agent; platelet binding; von Willebrand factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New platelet-binding proteins obtained from snake venom - inhibit binding of von Willebrand factor to platelet membrane glycoprotein IB, useful in therapy, diagnosis and surgery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAR72235 is a Vipera palestinae venom derived peptide. A peptide compsn. comprising AAR72235 and AAR72236 is claimed, it inhibits binding of platelets to von Willebrand factors and can therefore be used as an anti-thrombotic agent. (Updated on 25-WAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptide derived from Vipera palestinae venom - inhibits binding of platelets to von Willebrand factor, useful as antithrombotic agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAR72233 is a Vipera palestinae venom derived N-terminal fragment, the full peptide is given in AAR72235. A peptide compsn. comprising AAR72235 and AAR72236 is claimed, it inhibits the binding of platelets to von Willebrand factors and can therefore be used as an anti-thrombotic agent.
                                                                                                                                                                                              AAR72231 is a Vipera palestinae venom derived N-terminal fragment, the full peptide is glven in AAR72235. A peptide comparishing AAR72235 and AAR72235 is claimed, it inhibits the binding of platelets to von Willebrand factors and can therefore be used as an anti-

```
The invention relates to halyxin, a novel protein with very strong blood anticoagulation activity. The protein was separated from snake venom of Agkistrodon halys brevicaudus (a Korean pit viper) and can be used in the treatment of thrombogenesis. The present sequence is a peptide derived from the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Halyxin as blood anticoagulation protein separated from snake venom -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to halyxin, a novel protein with very strong blood anticoagulation activity. The protein was separated from snake venom of Agkistrodon halys brevicaudus (a Korean pit viper) and can be used in the treatment of thrombogenesis. The present sequence is the B chain of halyxin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a method for purifying Ahlysantinfarctease thrombase II from the snake wenom of chinese Agkistrodon acutus. The method involves using an anionic exchange column chromatographic process to separate and purify and the repurifying the thrombase in a fast protein purifying work station. It was found that the Ahylysantinfarctase thrombase II consists of two subunits, Subunit A (ABB83142) and Subunit B (the present sequence).

                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 3,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
